Natural Science, Vol. 1: A Monthly Review of Scientific Progress; September, 1892 (Classic Reprint) (Paperback)

By Unknown Author

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Natural Science, Vol. 1: A Monthly Review of Scientific Progress; September, 1892 The two addresses agree that the great mountain ranges of the world, whether above water or below them, had their foundations laid in the pre-geologic era Of the solidifying globe, as the later crustal movements seem to have followed the original lines of weakness; and this not only applies to the great meridional chains, but to the intersecting east and west lines, such as the mediterranean-caribbean depression and the corresponding alpine line of elevation, which dates at least from Palaeozoic times. Similarly they both conclude that the oceanic islets of the Pacific indicate an area of subsidence, and the submerged ridge of the land area there once cut up the Pacific Ocean, as the probable connection of the Atlas with the Venezuelan Cordillera once broke the continuity of the Atlantic. It, therefore, seems probable that the new stratigraphers will allow the palaeontologists the principal transoceanic bridges that they demand. Professor James Geikie suggests that the cosmopolitan distribution of Palaeozoic species was really due to the absence of...

Reviews

A whole new e book with a brand new standpoint. I have read through and i also am certain that i am going to planning to read again yet again later on. I found out this book from my i and dad advised this pdf to learn.

-- **Audrey Lowe I**

It is fantastic and great. It is really simplified but unexpected situations from the 50 % in the ebook. I discovered this ebook from my dad and i suggested this book to learn.

-- **Dr. Luna Skiles**
